

Tab S

TABLE SCREEN

Tab S is a flexible screen with enhanced sound-absorbing properties that improves both acoustics and focus — without taking up space. It can be used to create privacy, reduce visual distractions, and support personal organisation. With Tab S, you don't just improve the sound environment — you create clearly defined zones in flexible workspaces. The screens can be customised in height and width on request. Tab S comes with full documentation of its acoustic N10 rating (sound reduction).

Tab S desk screen is mounted on the front or short side of the desk and comes in a standard height of 650 mm. The screen has a fixed positioning when mounted, and is delivered with pre-drilled holes for fittings. When mounted on a desk, the top edge of the 650 mm screen extends 450 mm above the tabletop. A wall-mounted version is also available.

MODEL	Table screen	
DETAILS	– The screen is designed to allow on-site upholstery replacement by a technician. Mounting brackets are included (two or three, depending on the screen's width). Note: The Tab S desk screen is not compatible with sliding table tops.	
CONSTRUCTION	The total thickness of the screen may vary slightly depending on the choice of upholstery. The frame is made from solid pine (30 x 56/112 mm) with a 30 mm sound-absorbing polyester core. It is covered with 10 mm polyurethane foam and fabric upholstery. Mounting brackets are made from 5 mm powder-coated steel plate.
