# Spine

TASK CHAIR WITH LARGE HEADREST

Spine is a modular and ergonomic platform of hybrid chairs. The platform construction means that it can be easily rebuilt into all the variants within the series, and be adapted to varying uses throughout the office. Spine can alternate between flexible stool, meeting chair and dedicated office chair for focused work. The seating mechanism provides 360 degrees of freedom in the sitting movement, for active sitting. Spine's layer-by-layer design means that all parts of the chair are separable and can be replaced or updated as needed, and that the parts are made from pure, recyclable materials.

The Spine work chair has a "spine", a back post with a stepless bracket for adjusting the height of the backrest and headrest. Small or large headrest, where the large headrest provides extra privacy for focused work.
